

Screen surface – Polar TA

material	Nonwoven base support (diffusely reflective according to DIN 19045 type D), front side white
type	Projection surface according to DIN 19045 type D Multilayer thermoplastic surface on a special fiberglass carrier allows optimal flatness of the projection surface, the matt white projection surface with special coating, ensures a uniform projection according to DIN 19045 up to 45 ° right and left of the Projection axis, lifelike color reproduction
grammage	850 g/m ²
material thickness	0,62 mm
fire behavior	meets the requirements of DIN 4102 – B2
luminance factor	1,1
weldable	Yes
delivery	rolled

contains PVC

lightproof
